
Task Ten – Produce Software and Hardware Requirements

Reiterate the choice of hardware that you concluded in Task Six. This can be as simple as a list of the hardware but you must make reference to the work that you produced in task six so that the examiner knows that you have done this already.

You must however write about the software that you are using and describe the alternative pieces of software that you could have used. You might remember that you did something similar to this in Project 1b Task 5 and Task 9. You mustn't copy these tasks, but go into more detail and expand on them. You will only get top marks in this section if you justify in full the choice for all pieces of software that you are using.

Area	1 Mark	2 Marks	3 Marks	4 Marks
Produce Software and Hardware requirements	List the software and hardware requirements for the solution	Describe appropriate alternative software and hardware requirements for the solution	Describe appropriate alternative software and hardware requirements of the solution and justify their choice
